

Features & Benefits

- Three programs (A,B,C) with multiple start times
- 4 start times per program - excellent for repeat scheduling
- Up to 8 hours of run time per station
- 365-day calendar for leap year intelligence, true odd / even day watering & daylight savings feature (Patent Pending)
- Water budgeting & seasonal adjustment - adjust zones from 10% to 150%
- Easy to read seasonal adjustment with incremental bars on LCD display
- Programmable-event-day-off allows specific day(s) to always off
- Rain / weather sensor bypass switch on front panel allows to override active sensor for maintenance or manual watering
- Rain / weather sensor shows on display when it is activated
- Automated chronological ordering of start times / start time stacking
- Programmable delay between stations of zero seconds to 4 hours for slow closing valves or well recovery
- Programmable rain delay for 1 to 7 days
- Choose AM / PM or 24-hour clock mode
- One touch manual start & rapid advance
- User programmable test program
- Independent scheduling options of either days of the week, or odd & even days, or 1-31 day interval watering
- Programmable master valve/pump circuit that allows the user to set the master valve/pump circuit to operate with specific stations
- Internal junction box eliminates the need to purchase an external j-box

DMC Series Models:

- **DMC-6i: Indoor** - 6 station base model indoor cabinet with plug-in 120VAC transformer expands to 15 stations. **Suggested Price \$119.00**
- **DMC-6: Outdoor** - 6 station base model outdoor locking plastic cabinet with 120VAC transformer expands to 15 stations. **Suggested Price \$129.00**
- **DM-3: Expansion Module** - 3 station plug-in expansion model, used to expand both DMC-6 and DMC-6i from 6 to 15 stations. **Suggested Price \$29.00**

Direct Modular Controllers by Irrigation Direct are the easiest and best-engineered controllers you'll ever use. Right out of the box, you get six stations before you load any modules — and then, after you load each additional 3-station module, the DMC will expand to 15 stations without the need for expensive, specialized modules. Our unique Daylight Savings (Patent Pending) feature automatically resets to the correct time twice a year, or can be reprogrammed or turned off if desired. Our removable face panel makes programming a cinch and effortlessly reattaches back into the sturdy box. And finally, accessible battery compartments, a handy instruction manual holder with a pencil (Patent Pending), and large LCD screen set our controller apart. Irrigation Direct's DMCs are the right controller for a variety of watering requirements.

DMC Series

Direct Modular Controller

Product Highlights

All you'll ever need to stock is one controller and one kind of module — that's it.

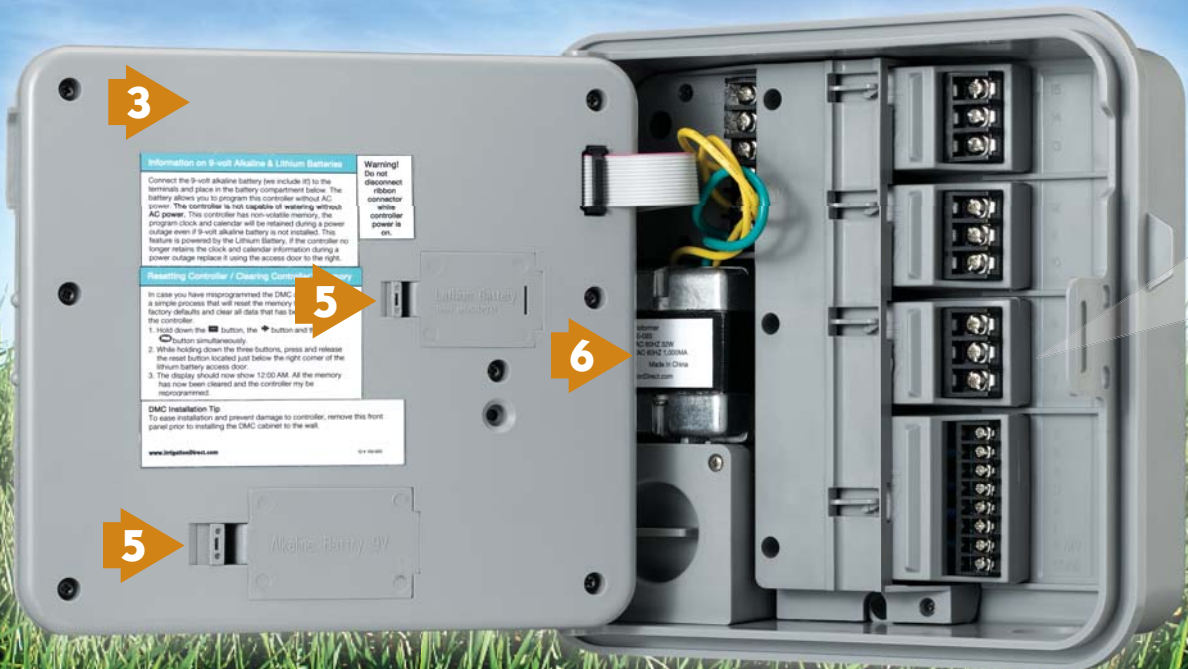

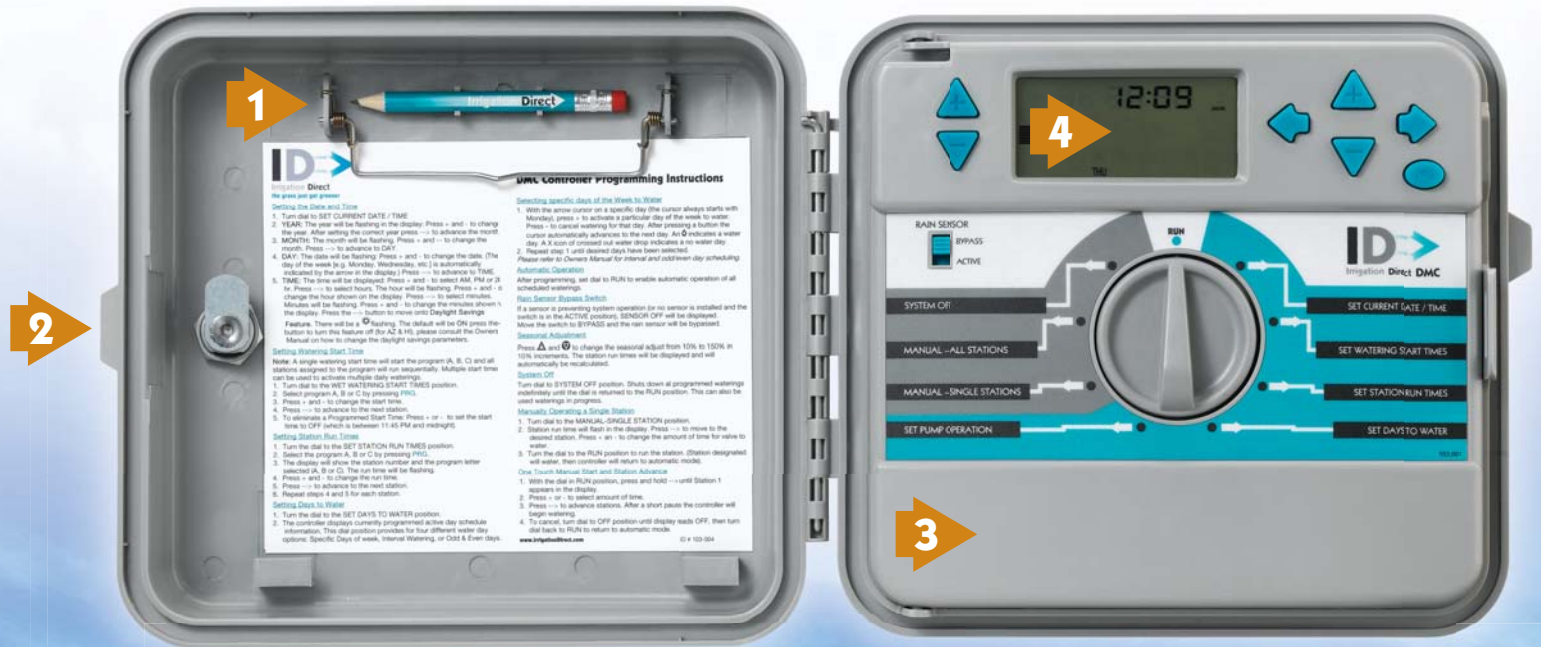

Irrigation Direct's DMC base unit comes standard with a six-station module. Insert three more standard DM-3 three-station expansion modules, and you're up to 15 — no need to buy special, expensive modules to reach that magic number. Irrigation Direct simplifies your inventory while still supplying the best controller on the market.

No other controller on the market has a daylight savings feature. (Patent Pending)

But Irrigation Direct's does. Daylight Savings Time can force you to reprogram the clock on most other controllers twice a year, but ours automatically resets to the correct time. Don't have Daylight Savings Time? It's easy to disable the feature and or change if the law changes.

Eliminate customer call-backs with our well-engineered controller box.

Our instruction manual finds its home nicely tucked inside the controller door, so your customers are unlikely to lose it. But the thoughtful features on our box don't stop there. Our tab opening design makes opening our box simple, and doesn't strain wall mountings. Our removable face panel reattaches in a snap. You can actually access battery compartments (even though we include all needed batteries). Our large LCD screen is easier to read, and we even include a pencil and holder to record your programs. Quality — it's all in the details.

Additional Features & Benefits

1 Instruction Manual Holder Inside Door of Controller

- Reduces call-backs, since spring-loaded design keeps the manual with the controller
- Pencil and holder for easy recording of programs also included (Patent Pending)

2 Tabs on Door and Cabinet Make Opening Easy

- No strain on wall mounting

3 Removable Face Panel for Easy Job Site or In-Home Programming

- Requires 9-volt battery — Irrigation Direct includes it!
- Easy-to-use face panel hinge design, easy to reconnect

4 Large LCD Screen Makes it Easy to See while Programming

5 Easy Access Doors On Circuit Board to Change Lithium & 9-Volt Alkaline Batteries

6 Excellent Surge Protection for Primary and Secondary Power

Hot-Swappable Modules

- DMC recognizes modules' addition or removal with power on
- DMC will still run programs even if modules are not installed in sequence
- If a module is removed for service, the DMC will still water all other stations

Expands to 15 Stations Using Cost-Effective 3-Station Modules

- Don't need to use more expensive 9-station modules to get to 15

Base Model Comes with 6 Stations

- Not 3 or 4, like other brands' controllers
- Lowers your cost per station

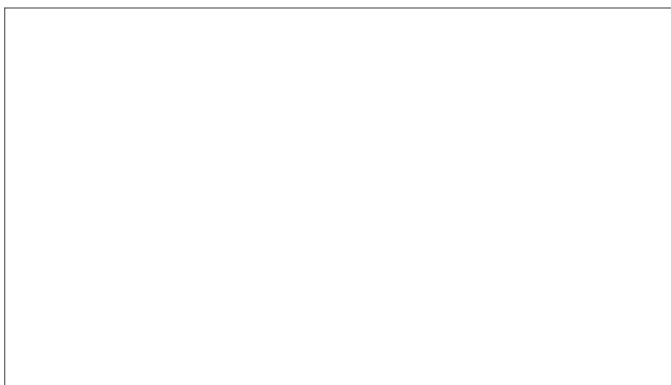

DMC Product Specifications

- Station Output: 24VAC .56 Amps
- Transformer Output: 24VAC 1.0 Amps
- Capable of operating equivalent of 3 solenoids simultaneously
- Operation Temperature: 0°F to 150°F
- NEMA 3R Rated Outdoor Enclosure
- UL Listed
- Key Lock on Outdoor Controller Model DMC-6
- Remote Control Ready - will work with Hunter remote
- Valve Test Terminal - allows quick matching of field wires

Product Comparison - Controllers	Irrigation Direct DMC	Rain Bird ESP-M	Irritrol Rain Dial Plus	Hunter Pro-C
Base model comes with 6 stations	●			
Expands to 15 stations using cost effective 3 station expansion modules	●			
True modular design with station expansion modules	●	●		●
Non-volatile memory saves programs indefinitely	●	●	●	●
9-volt alkaline battery not required to keep current time and day	●	●		●
Lithium battery (keeps current time and date) easy to change with access door	●			
9-volt alkaline battery included with each controller - nothing extra to buy	●		●	
Electronic short-circuit protection - no fuses to replace or breakers to reset	●	●		●
Easy intuitive dial programming	●	●	●	●
Instruction manual holder inside door - reduces call backs	●			
Pencil and holder for ease of recording programs	●			
Removable face panel for remote programming	●	●	●	●
Easy-to-use face panel hinge design	●	●		
Daylight savings feature - automatically resets to correct time twice a year	●			
3 independent programs (A, B, C)	●	●	●	●
Minimum of 4 daily starts per program	●	●		●
Up to 12 starts per day	●	●		●
Up to 8 hours of station run time per station	●			
True odd / even programming (365 day calendar clock)	●	●	●	●
1 - 31 day interval programming	●	●		●
Choice of independent day scheduling options by programs	●	●	●	●
Primary and secondary surge protection	●	●	●	●
Seasonal adjustment for water budgeting	●	●	●	●
Easy-to-read seasonal adjustment using incremental bars on LCD display	●			●
Weather sensor: displays when sensor is activated	●		●	●
Rain sensor override bypass on front panel	●	●		●
Large easy-to-read LCD display	●	●		
Programmable event day off for all day schedules	●	●		●
One-touch manual start / rapid advance	●	●		●
Remote control ready from factory	●	●		●
Will work with Hunter remote control units	●			●
Programmable 0 - 7 day rain delay	●			●
Programmable delay between stations	●			●
Master valve and pump start circuits individually programmable by station	●			●
NEMA 3R rated outdoor enclosure	●	●	●	●
Key lock on outdoor cabinet	●	●		●
Tabs on door and cabinet make opening the controller very easy - no strain on mounting	●			
Primary power connections made inside cabinet - no junction box required	●	●		●
24VAC valve test terminal	●	●		●
Choose AM / PM 24-hour clock mode	●			●
User programmable test cycle	●			●
